Innovazione Armonica. Restare umani nell'epoca dell'AI e delle grandi sfide di transizione.

Dr. Francesco Cicione
Entopan Harmonic Innovation Group

10 Marzo 2026, ore 11:00, Aula R, Edificio delle Bioscienze

Abstract

The seminar critically examines the global race toward artificial intelligence, arguing that rapid **technological** acceleration without wisdom risks producing ethical and political blindness. It outlines a crossroads between two dominant agendas of control – Western capitalist techno-right and Sino-Asian statist techno-left – and a possible "third way" rooted in European and Mediterranean humanism. The proposal is to recover ethical, sapiential and spiritual criteria to orient AI research and policy. Aim: to foster interdisciplinary debate so that we may still "walk as seers" before it is too late.

Short bio

Francesco Cicione is a **possibilist** entrepreneur in the innovation field, founder and president of Entopan – Smart Networks & Strategies and founding president of Harmonic Innovation Group and Ecosystem.
He is the main inspirer of the Harmonic Innovation paradigm, president of the Italian Scientific Society for Harmonic Innovation, co-founder and Executive Vice President of the International Institute Colorni-Hirschman, and founder of the Global South Innovation Forum. He teaches "Foundations of Harmonic Innovation" at the European University of Rome and is a columnist and public speaker on innovation, society and technological humanism.
